Generación de tablas

1.- Convertimos la matriz de datos a un data frame, se Agrupan los valores para la variable Petal.Length y se calcula la frecuencia absoluta.

```
tabla_PL<-as.data.frame(table(PL = iris$Petal.Length))
```

2.- Frecuencia absoluta de la variable Petal. Length (PL) Se muestra la tabla de contingencia para la variable PL con su respectiva frecuencia absoluta.

tabla_PL

```
